

llr40: per-arm speed-up, one value per kernel (vs numba)

■ c ■ fortran ■ cpp ■ solid served / faded solved, labelled geomean/n

Bars are NOT comparable pairwise: each is over that arm's own kernel set. See arm_pairs.csv.
Whiskers are the 95% log-t interval over the arm's kernels; the two times behind each ratio are in per_arm_summary.csv.
